Investigating & Diagnosing Moisture Problems—Arnold Schnabel

On Saturday, June 20th in the NORMI LIVE Talking Studio, you will have the opportunity to take our FIRST Building Science Course. There are EIGHT courses in this series and this is PART 1. These courses have been designed for 1.5 hours to discuss details in the area of building sciences that deal with moisture intrusion, air infiltration, insulation, iaq, non-vented crawlspaces and attics, and other subjects pertinent to the way homes are constructed. This class would be good for any person who is interested in knowing more about the construction process!
Don't miss this! Cost of this module is **\$25.00**

Reduce POWER Consumption

The Professional Screening Partner Power program starts with this simple question, “On a scale of 1 to 10 with 1 being **NOT** interested and 10 being **VERY** interested, how interested are you in reducing your energy usage and the costs associated with that usage over the next twelve (12) months?”

Did you realize that virtually EVERYONE is interested! Why? Because the high cost of energy is sapping our family resources! Of course clients can get information from the US Dept. of Energy, Energy Star, or their local electric company. In fact, some electric companies will provide what appears to be an “energy audit”. BUT, never before have all the components of the home been considered and solutions offered that will significantly reduce power usage.

Just like our PSP-IAQ Assessment program, there is NO silver bullet when it comes to reducing energy usage but by taking small incremental steps toward reducing usage (like the installation of a Point-of-Entry Power Conditioning Device), a significant reduction can happen fairly quickly. The PSP-Power Assessment program even gives the client the ability to **TRACK THEIR USAGE** so they can be sure they are reducing consumption, even if their power company raises the rates.
Cost of this class is **\$149.00**
