CFS	Certified Formaldehyde Screener

## FIRST OF ITS KIND!

The Certified Formaldehyde Screening program is an online or self-study course that trains the IAQ Professional in techniques to screen for and then reduce formaldehyde contamination levels in indoor environments. The class covers the sources of formaldehyde, the deleterious health effects, and the solutions recommended to lower levels and manage the indoor air quality environments. This class is based on information provided by the US Department of Health and Human Services and other resources that are included in the class online or on CD.

Once the student completes this class, he is expected to pass a test evidencing his complete understanding of the issues surrounding formaldehyde and the techniques used to reduce formaldehyde levels on a permanent basis. After the student has completed the online quiz, he is encouraged to activate his membership so he can take advantage of the benefits offered by NORMI to ACTIVE Members.

The NORMI CFS is given direction on how to research more information and, included in the CD or online course, is provided a 468 page document as a reference guide from the US

Department of Health and Human Services. Online resources for this course include equipment spec sheets, a formaldehyde/ozone formula for calculating ozone levels to reduce formaldehyde, and the class handouts in color and black/white for the student to make class notes during the class.

The goal of the CFS is to provide an ongoing IAQ Management program that will insure that levels of formaldehyde have been substantially reduced to levels below the acceptable limits established by the EPA, NIOSH, OSHA, the

World Health Organization and the American Conference of Governmental and Industrial Hygienists.

NORMI is in the process of establishing a VOC Certificate of Sanitization to use in conjunction with this training so the NORMI CFS can provide documentation and proof that the techniques

and services offered are actually effective in reducing formaldehyde and other VOCs. Special logging equipment is discussed that will record and document pre- and post-screening formaldehyde.

The NORMI CFS course is available in a Self-Study CD Version (\$149) or an ONLINE version (\$99) at <http://www.besttrainingschool.com/cfs.php>
