Professional Screening Partner

THE ASSESSMENT—Here’s how it works. PSP partners will distribute IAQ surveys throughout communities. Homeowners will fill out the surveys and qualify themselves as candidates for assessment. PSP partners will then provide homeowners with assessment kits and assist the customers in the IAQ assessment and sampling of their indoor environments which will include heating and cooling systems, general living areas, and water prone areas. Dust and swab samples will be collected and sent to a laboratory for analysis. The NORMI Top 40 Indoor Air Contaminants checklist will be reviewed and completed, documenting observed contaminants within the home. Then the Top 10 IAQ Solutions to indoor air contaminants will be discussed between the customer and the PSP partner.

THE SOLUTION—Once the laboratory results are received, the PSP partner and the homeowner will review the assessment report, the Top 40 Contaminant checklist, and the laboratory report to develop the IAQ Blueprint. The IAQ Blueprint will record all defined documented IAQ problems within the home and match appropriate IAQ solutions to those problems. Finally, an implementation schedule including mechanical IAQ management systems, cleaning protocols, and, where necessary, structural repairs will be designed to secure a healthy

indoor air environment.

THE PURPOSE—The NORMI Professional Screening Partner program is the entry level IAQ assessment program designed specifically for contractors and IAQ sales professionals. The program is a solution-based assessment program to match product solutions with discovered and defined IAQ problems. If you are involved in the home assessment industry or in the sale of indoor air quality products or services, you need this course. Improve your sales, present yourself as a credentialed professional, and be a part of improving the indoor air quality and, possibly, health of millions of Americans homes and families. Become a NORMI trained and certified Professional Screening Partner today.

NINE-STEP PSP MODEL

1. COMPLETE IAQ Survey
2. SELF-ASSESS Indoor Environment
3. COLLECT Samples for Analysis
4. Top 40 IAQ Contaminants
5. Top 10 Successful IAQ Solutions
6. ANALYZE Lab Analysis
7. ADDRESS Immediate Concerns
8. DEVELOP IAQ Blueprint
9. IMPLIMENT IAQ Solutions
